The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-13, 16, 17, and 21-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boger et al. (U.S. Patent No. 4,687,137) in view of Miller (U.S. Patent No. 5,609,711) and further in view of Focke et al. (U.S. Patent No. 6,463,716).

Boger discloses the claimed invention, see for example Figs. 1, 2, 4, and 6; via adhesive champers 107, discharge openings 60 with a diameter of at least 5mm, nozzle 40 and 52, valves 70, 72, 74, 76, and 80; application head 20; the gluing stations including glue outlets which can be fed selectively such that a format of the applied glue is defined by selection of the glue outlets, see for example (Figs. 1-6; via controlling dispensing valves 70, 72, 74, 76, 78, and 80); the glue feed including at least one chamber extends linearly in a spatial direction perpendicular to a transport direction of the bag, with a rectangular cross-section, through which at least one part of the valves is fed with the glue and at least one glue supplying line which extends to the application head, see for example (Figs. 4-6; via adhesive chamber 107). It appears that Boger's adhesive dispensing apparatus is capable of dispensing whatever kind of glue as the claimed structure limitations been fully disclosed by Boger.

Page 3

Boger does not disclose the use of starch glue. However, Miller discloses a similar device with the use of dispensing starch glue, see for example (Fig. 3; via adhesive applicator device 28).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Boger's device by dispensing starch glue, as suggested by Miller, in order to provide a starch adhesive system will minimize transfer of water to the plies of material being joined (column 4, lines 46-48).

Boger neither disclose the exact chamber's diameter of at least 5mm, 7mm, 10mm, and/or 15mm, nor a volume of the chamber has a ratio of at least 1.5 to a volume sum of all of the glue connections to and from the valves which are supplied with the glue from the chamber.

However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Boger's chamber's diameter to be 5mm, 7mm, 10mm, and/or 15mm, and a volume of the chamber has a ratio of at least 1.5 to a volume sum of all of the glue connections to and from the valves which are supplied with the glue from the chamber since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPO (CCPA 1980).

Boger in view of Miller lack the teaching of having the glue chamber/head to be displaceable. However, Focke discloses a similar device with the use of displaceable/moving glue dispensing, see for example (Figs. 1-8; via glue nozzle 14).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Boger's glue head (head 20) to be displaceable, as

suggested by Focke, in order to improve the reliable operation of glue dispensing (column 1, lines 26-29).

Regarding claim 7: Boger discloses that two of the valves supplying the glue from the chamber are arranged in an overlapping manner, see for example (Figs. 4 and 5).

Regarding claims 22 and 23: Boger discloses that the glue supplying line includes boreholes or opening in a region of the application head (Figs. 1-4); Wherein the chamber is a borehole that is provided in the application head (Fig. 4; via chamber 107).

## Response to Arguments

Applicant's arguments with respect to claims 1-13, 16, 17, and 21-25 have been considered but are moot in view of the new ground(s) of rejection.

## Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Application/Control Number: 10/563,859 Page 5

Art Unit: 3721

however, will the statutory period for reply expire later than SIX MONTHS from the date of this

final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Sameh H. Tawfik whose telephone number is 571-272-4470.

The examiner can normally be reached on Tuesday - Friday from 9:00 AM to 7:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Rinaldi Rada can be reached on 571-272-4467. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
